

# RANE Services for Chief Information Security Officers

Identifying risks that can adversely affect the integrity of your data or compromise your IT infrastructure requires an ability to gather and assess the right information. To meet today's challenges, cybersecurity teams need to integrate resiliency strategies and mitigation tactics for cyber threat prevention, detection, and response, while keeping pace with rapidly advancing technology and emerging threats.

## CISOs ARE STRUGGLING TO STAY AHEAD OF THE LATEST THREATS

- Today's risks are inter-disciplinary and intersecting – with web-controlled access to buildings, air conditioning, and even soda machines providing potential entry points for threat actors.
- Internal threats are as much a concern as external hackers, making employee training, internal controls, and continuous monitoring and auditing even more critical.

## CISOs ARE EXPERIENCING CYBER INFORMATION OVERLOAD

- It can be challenging to separate the signal from the noise and find the right information. CISOs need actionable threat intelligence with insight into how these risks impact information security. And they need information to build their cases for appropriate resource allocation.
- Understanding the complex cyber vendor landscape can also be daunting. Many providers have similar offerings and claims for their services, making it difficult to sift through this information to find the best solution.

## CISOs NEED TO BE WELL VERSED IN ENTERPRISE CRISIS RESPONSE

- Many CISOs focus their attention on prevention and detection, but not enough on developing a holistic incident response plan.
- Resiliency is now a board-level issue, requiring a detailed continuity plan, adequate governance around strategy and process, and support from executive leadership.
- Scenario planning and tabletop exercises are critical to managing disaster recovery, developing sound business and communication practices, and ensuring that all policies are followed.

## How RANE Delivers

RANE provides access to the latest intelligence and expertise, allowing CISOs to take a more proactive approach to risk mitigation.

- **Cost-effective sourcing** of credentialed experts and service providers with solutions that include cybersecurity assessments, incident response policies and practices, employee and board cyber training, and implementation of new technologies.
- **Improved situational awareness** through "smart curation" of relevant content on security trends and technologies, risk mitigation best practices, and insights into emerging threats.
- **Experts that complement and augment** your existing network to help members sift through the complex service provider landscape to find the right expertise to address their particular matter.
- **Oversight and project management support** for larger-scale initiatives. From risk assessments to due diligence to reviews of policies and procedures, RANE's in-house subject matter experts provide advice on proactive approaches to mitigating risk, help scope engagements with experts, and assure best execution by stewarding projects through to completion.

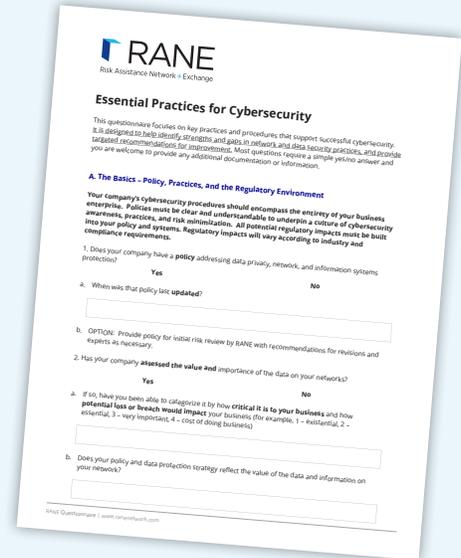

## Take RANE's Cybersecurity Pre-Assessment

A recent survey found that while 75% of security executives believe they are capable of protecting their businesses, one in three cyber-attacks result in a security breach.

Drawing on industry benchmarks and our subject matter experts, the RANE pre-assessment questionnaire is designed to assess your current cybersecurity protocols and identify items to consider to further secure your cyber assets.

After completing the 15-20 minute questionnaire, RANE will analyze the responses, identify any gaps and areas for further follow-up, and schedule a meeting to review the results.

Request your copy of RANE's Cybersecurity Pre-Assessment by emailing [info@ranenetwork.com](mailto:info@ranenetwork.com).

## USE CASE:

ACCESS TO EXPERT MARKETPLACE TO EFFICIENTLY RESPOND TO RISK ISSUES		
 <b>INQUIRY</b>	 <b>SOLUTION</b>	 <b>RESULT</b>
<p>Retail client experienced a <b>cyber breach</b> right before the busy holiday shopping season.</p>	<p>RANE connected the company to a cyber expert who consulted on <b>immediate</b> steps to secure their network and on a project to strengthen their cyber policies and procedures.</p>	<p>Quickly found the <b>right expertise</b>, saving them time, money, and effort.</p>

### ADDITIONAL RANE CYBERSECURITY PROGRAMS:

- Cybersecurity assessments
- Roadmap for cybersecurity resilience
- Incident response planning and simulations
- Cyber due diligence, syncing practice with policy
- Breach remediation and support
- Vendor selection and evaluation
